

Corset Tips

Corset featured in episode is Simplicity 8363 Fantasy Ranger
Boning is Dritz Featherlite boning without the casing.
Grommets are Dritz 3/8 inch or 9 mm size in Antique Brass.

Tips for using boning:

- Trim the boning on each corner and then across the top to avoid creating a sharp tip that will poke through your garment over time.

- If your corset creates self casings, you can remove the casing from your boning.

- Steel and other plastic bonings may need to be purchased at the correct length for each casing channel.

Tips for Grommets:

- Be sure to create a large enough hole for the male end to pass through, or fabric will get caught inside the grommet.
